Thank you

We want to start by saying a huge thank you!

You and your family’s continued support of this study has ensured it is a leading reference source for Australian researchers and policymakers. To have data on the growth and development of Australians over such a period is an epic achievement, and that is because of each one of you.

Thank you for the time you take to complete Growing Up in Australia: The Longitudinal Study of Australian Children (LSAC), for welcoming our interviewers into your spaces and for believing in a better tomorrow as you continue your journey into adulthood.

We are incredibly grateful to you for sharing how you have continued to grow up in Australia.

Thank you, from the Growing Up in Australia team.

GOT QUESTIONS?

We’ve got answers!

Hello from the Roy Morgan team! We are excited to be working on this great study and, in particular, we are looking forward to meeting you, the most important people in the Growing Up in Australia study. You may have heard of Roy Morgan; we are an Australian owned and operated research company who published our first poll in 1941. Since this time we have been perfecting our craft, ensuring we are highly regarded for our integrity and independence and conducting many of the best-known research studies in Australia, including:

• HILDA – the Household, Income and Labour Dynamics in Australia Survey, also known as ‘Living in Australia’.
• LSIC – the Longitudinal Study of Indigenous Children, also known as ‘Footprints in Time’. Like Growing Up in Australia, this study involves interviews with parents and children and focusses on the developmental outcomes of Indigenous children.
• National Drug Strategy Household Survey – an ongoing national survey about awareness, attitudes and behaviour relating to licit and illicit drugs.

We take great pride in being an Australian-based organisation employing hundreds of interviewers across the country and in being certified to internationally recognised standards of excellence for research, quality management and information security.

We have a strong focus on innovation and overall participant experience. Our Interviewers are experienced, well-trained and ready to answer your questions, and we look forward to meeting you soon.

Professor Jan Nicholson from La Trobe University, is one of the original team who designed Growing Up in Australia in 2002. She currently chairs the Advisory Group, who provide expert advice to the study. Jan is a passionate advocate for the unique knowledge that can be gained from longitudinal studies and played a key role in placing families at the centre of the Growing Up in Australia study. Jan has published more than 60 scientific papers using Growing Up in Australia data. Topics that have attracted attention across the world include parents’ mental health, effects of adversity on children’s development, and the impact of parental work on family wellbeing. One paper on the impact of mothers’ and fathers’ parenting style on children’s health has been cited by more than 400 other researchers worldwide.

Hello again!

Working together

Your experiences with social networks

Findings from Growing Up in Australia data collected in 2020.

Nearly all young people had social networking accounts that they posted on at least occasionally (87% of 16-17 year olds; 85% of 20-21 year olds). Only a small proportion of these (17% of 16-17 year olds; 13% of 20-21 year olds) posted daily or more frequently.

Young people reported few negative impacts of social networking. These included the following:

<table>
<thead>
<tr>
<th>Used social media to forget problems</th>
</tr>
</thead>
<tbody>
<tr>
<td>16-17 year olds</td>
</tr>
<tr>
<td>20-21 year olds</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Couldn’t stop using social media</th>
</tr>
</thead>
<tbody>
<tr>
<td>16-17 year olds</td>
</tr>
<tr>
<td>20-21 year olds</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Felt that social media had negative impacts on work/study</th>
</tr>
</thead>
<tbody>
<tr>
<td>16-17 year olds</td>
</tr>
<tr>
<td>20-21 year olds</td>
</tr>
</tbody>
</table>
Welcome to the new look Growing Up in Australia: The Longitudinal Study of Australian Children (LSAC). This is the first of a series of ‘Study Updates’ that we are preparing to keep you posted about all things Growing Up in Australia.

As you enter and move through adulthood, we are excited to follow your journey and design a study that reflects this. Every single person who has contributed to Growing Up in Australia has contributed to a better understanding of Australians’ growth and development. As the study evolves, and you continue to grow, there is an important story to tell. The information you’ve provided in the past and your continued commitment to this study will inform policy and service delivery for you, and future generations.

In this issue, we introduce you to a founding member of the study, show you some findings from the 2020 survey, and introduce you to our new fieldwork partner.
